

indulge in the luxury of nature

## DESIGN FACTS (Sustainability)

Committed to the health of their environment, and to environmentally sensitive and sustainable tourism, Michael and Jill engaged the professional services of Gianni Zandel, architect of Adelaide, to purpose design the luxury eco lodges accommodation based on eco sensitive consideration.

The principles applied to the eco sensitive constructions include;

- In ground slab for thermal mass
- Reverse veneer using limestone block interior as high thermal mass with careful attention to ventilation, retaining winter sun, and limiting summer sun
- Insulation R2 up to R5, double glazing in south facing windows, attention to window orientations and size
- Biolytix organic worm treatment for all waste water
- Large north facing windows
- Minimum water use fittings and energy efficient appliances
- A stand alone power supply with the principal power source coming from solar energy and approx 4.8 hours available per day and a three day supply in summer
- Rain water harvested in this pristine environment
- Location interference minimised

Your amenities including Perse organic hair products and body wash derived wholly from pure natural ingredients are dispensed to avoid wasteful packaging. Recycled or recyclable (PET) material is used for other guest amenities where packaging is unavoidable.

Your breakfast and snacks are locally sourced and organic wherever possible.

Bed linen, towels and robes have been chosen to maximise the use of natural products and to ensure a quality experience.

Local indigenous and other artists' work is featured on the walls.
